

Many of our products are safe for children but have not been tested on individuals under 18 years of age. Therefore, we would recommend physician and parental discretion on those who are under the age of 18 years when using our products.

It is important to note that all our products go through many safety tests, including our 6S Quality Process. If there is ever any question or concern on the use of any of our products on an individual younger than 18 years, please consult a physician before use. For example, while our AP 24 products are safe for children to use, they should not be used on children under the age of 2 years, and children over the age of 2 years would need to be supervised while using these products.
